

Part of the Steering Committee

Dr. Tarek explaining the objective of the present component

Part of 1st steering committee

1. INTRODUCTION

Recent events have raised the issue of safety and emergency preparedness for all people in the country. These events include those which are naturally occurring such as earthquakes or floods. They also include industrial accidents that cause serious damage to the environment and to the life and property.

Causes of naturally occurring events have not been detected, predicted or effectively prevented. In the future, there is a need to prepare us to these events, to recognize them and where they occur.

Dr.Tarek explaining the classification of hazardous substances

Dr. Tarek discussing the Risk assessment concept
